Deep Learning In Python Prerequisites: Master Data Science And Machine Learning With Linear Regression And Logistic Regression In Python (Machine Learning In Python)

Synopsis

Do you find deep learning difficult? So you want to learn about deep learning and neural networks, but you don't have a clue what machine learning even is. This book is for you. Perhaps you've already tried to read some tutorials about deep learning, and were just left scratching your head because you did not understand any of it. This book is for you. Believe the hype. Deep learning is making waves. At the time of this writing (March 2016), Google's AlphaGo program just beat 9-dan professional Go player Lee Sedol at the game of Go, a Chinese board game. Experts in the field of Artificial Intelligence thought we were 10 years away from achieving a victory against a top professional Go player, but progress seems to have accelerated! While deep learning is a complex subject, it is not any more difficult to learn than any other machine learning algorithm. I wrote this book to introduce you to the prerequisites of neural networks, so that learning about neural networks in the future will seem like a natural extension of these topics. You will get along fine with undergraduate-level math and programming skill. All the materials in this book can be downloaded and installed for free. We will use the Python programming language, along with the numerical computing library Numpy. Unlike other machine learning algorithms, deep learning is particularly powerful because it automatically learns features. That means you don't need to spend your time trying to come up with and test kernels or interaction effects - something only statisticians love to do. Instead, we will eventually let the neural network learn these things for us. Each layer of the neural network is made up of logistic regression units. Do you want a gentle introduction to this dark art, with practical code examples that you can try right away and apply to your own data? Then this book is for you. This book was designed to contain all the prerequisite information you need for my next book, *Deep Learning in Python: Master Data Science and Machine Learning with Modern Neural Networks* written in Python, Theano, and TensorFlow. There are many techniques that you should be comfortable with before diving into deep learning. For example, the backpropagation algorithm is just gradient descent, which is the same technique that is used to solve logistic regression. The error functions and output functions of a neural network are exactly the same as those used in linear regression and logistic regression. The training process is nearly identical. Thus, learning about linear regression and logistic regression before you embark on your deep learning journey will make things much, much simpler for you. Required resources Following this book does not require any external materials. Everything needed (Python, and some Python libraries) can be obtained for free.

Book Information

File Size: 380 KB

Print Length: 43 pages

Simultaneous Device Usage: Unlimited

Publication Date: March 19, 2016

Sold by: Digital Services LLC

Language: English

ASIN: B01D7GDRQ2

Text-to-Speech: Enabled

X-Ray: Not Enabled

Word Wise: Not Enabled

Lending: Not Enabled

Enhanced Typesetting: Enabled

Best Sellers Rank: #62,250 Paid in Kindle Store (See Top 100 Paid in Kindle Store) #8 in Books > Computers & Technology > Computer Science > AI & Machine Learning > Neural Networks #16 in Kindle Store > Kindle Short Reads > One hour (33-43 pages) > Computers & Technology #51 in Books > Computers & Technology > Computer Science > AI & Machine Learning > Intelligence & Semantics

Customer Reviews

Deep learning prerequisites ebook.... Pretty good, though similar info is available in many places. Still, lazyprogrammer's take is cohesive. For me it acted as a conceptual reinforcement after taking Andrew Ng's coursera course. I'm currently revisiting all of that coursera course's matlab programming assignments, and coding them from scratch in python, so lazyprogrammer's ebooks have been helpful, if for no other reason than having an alternative explanation of the core concepts. The book is short, but reasonably thorough on the introductory concepts presented. Worth the low price? Definitely.

As someone w.o arithmetic skills, the concepts are clear enough so I feel able to explore deeper. Useful stuff if youre into cool things

clear explanation of one point of view

Deep Learning in Python Prerequisites: Master Data Science and Machine Learning with Linear

Regression and Logistic Regression in Python (Machine Learning in Python) Unsupervised Deep Learning in Python: Master Data Science and Machine Learning with Modern Neural Networks written in Python and Theano (Machine Learning in Python) Convolutional Neural Networks in Python: Master Data Science and Machine Learning with Modern Deep Learning in Python, Theano, and TensorFlow (Machine Learning in Python) Deep Learning in Python: Master Data Science and Machine Learning with Modern Neural Networks written in Python, Theano, and TensorFlow (Machine Learning in Python) Regression Modeling Strategies: With Applications to Linear Models, Logistic Regression, and Survival Analysis (Springer Series in Statistics) Deep Learning: Recurrent Neural Networks in Python: LSTM, GRU, and more RNN machine learning architectures in Python and Theano (Machine Learning in Python) Regression Methods in Biostatistics: Linear, Logistic, Survival, and Repeated Measures Models (Statistics for Biology and Health) Python: Python Programming Course: Learn the Crash Course to Learning the Basics of Python (Python Programming, Python Programming Course, Python Beginners Course) Unsupervised Machine Learning in Python: Master Data Science and Machine Learning with Cluster Analysis, Gaussian Mixture Models, and Principal Components Analysis A collection of Advanced Data Science and Machine Learning Interview Questions Solved in Python and Spark (II): Hands-on Big Data and Machine ... Programming Interview Questions) (Volume 7) Deep Learning Step by Step with Python: A Very Gentle Introduction to Deep Neural Networks for Practical Data Science Data Analytics: What Every Business Must Know About Big Data And Data Science (Data Analytics for Business, Predictive Analysis, Big Data) Deep Learning: Natural Language Processing in Python with Word2Vec: Word2Vec and Word Embeddings in Python and Theano (Deep Learning and Natural Language Processing Book 1) Deep Learning: Natural Language Processing in Python with GLoVe: From Word2Vec to GLoVe in Python and Theano (Deep Learning and Natural Language Processing) Applied Logistic Regression Data Analytics: Practical Data Analysis and Statistical Guide to Transform and Evolve Any Business. Leveraging the Power of Data Analytics, Data ... (Hacking Freedom and Data Driven) (Volume 2) Analytics: Data Science, Data Analysis and Predictive Analytics for Business (Algorithms, Business Intelligence, Statistical Analysis, Decision Analysis, Business Analytics, Data Mining, Big Data) Python: Python Programming For Beginners - The Comprehensive Guide To Python Programming: Computer Programming, Computer Language, Computer Science (Machine Language) Deep Learning: Natural Language Processing in Python with Recursive Neural Networks: Recursive Neural (Tensor) Networks in Theano (Deep Learning and Natural Language Processing Book 3) Ruby: Programming, Master's Handbook: A TRUE Beginner's Guide! Problem Solving, Code, Data

Science, Data Structures & Algorithms (Code like a PRO in ... web design, tech, perl, ajax, swift, python,)
