Synopsis

Catapult Your Reading Speed To New Heights! It has been said that "Knowledge is power." Nothing can ever be truer than this today in the so-called Information Age. If you have more information, you have more resources. This means that you have more money and you have more influence. Successful people are usually voracious readers. They get hold of information and use it to their advantage. However, gathering and analyzing information takes time. And honestly, a lot of people just don't have much time. As if achieving work-life balance isn't hard enough, dedicating time to read is in itself a challenge. So, sure, you know how to read, but do you read fast enough? This book solves your information problem by teaching you the secrets of speed-reading. Speed-reading enables you to maximize your reading speed. You see, the average adult reads at a speed of 300 wpm (words per minute). At this rate, reading the newspaper from page to page would take at least half an hour. But speed-reading can help you read as fast as 1,500 wpm, and this means you will finish reading the same newspaper from page to page in only 6 minutes. Imagine what else you can do with this speed: You will read through reports, get through study cases, and conduct research in no time. Reading will be like breathing to you, and the more information you manage to get into your system, the better and wiser decisions you are able to make. But that's not all. There's a very practical side to speed-reading, too. Do you recall how many emails you receive in one day? Perhaps 50? A hundred? Opening and reading those emails will take time. Add that up to the time it takes for you to respond to each email and read relevant reports before you actually compose your response to those emails. With speed-reading, even your job can be a breeze. You should learn how to speed read: Reading is an "abandoned" skill that needs to be proactively improved. It is ironic that a lot of work today involves one critical skill "reading." Yet, no formal additional training is solely dedicated to improving your reading skills. You simply have to work on it yourself. Speed-reading will enhance your confidence. The more you know, the more confident you are. Speed-reading does not only enable you to read fast; it enables you to understand concepts quickly, too. Since you can read just about any subject, you will not have second thoughts about being introduced to a new type of work, environment, or set-up, because all these "new" things will likely be familiar to you in no time. Speed-reading will improve your brain power. The brain is a muscle that gets stronger as you engage in learning and study. Reading is one of the best ways to give your brain a good exercise. You will have improved focus and better memory through speed-reading. Speed-reading will help you reduce stress. Besides gathering a lot of practical information, reading also enables you to relax. Reading can take you to places you have never been. It lets you experience adventures you have never imagined, and it can inspire and

motivate you to achieve your goals and ambitions. You can be sure that you will find joy and pleasure in reading. But with speed-reading, you can do so in just little time. With your renewed skill and eagerness to read, you will witness a number of opportunities open before you, and never will you look at reading in the same way ever again. Improve your reading skills now. Customer Reviews

I don't know if this works yet, but he raised some good points about subvocalization. We need to ask ourselves what do we want out of this reading and focus on those things.
