Spectrum Math, Grade 6

Synopsis

Test with success using the Spectrum Math workbook! This book helps students in grade 6 apply essential math skills to everyday life. The lessons focus on fractions, decimals, percents, algebra, introductory geometry, probability, and statistics, and the activities help extend problem-solving and analytical abilities. The book features easy-to-understand directions, is aligned to national and state standards, and also includes a complete answer key. Today, more than ever, students need to be equipped with the essential skills they need for school achievement and for success on proficiency tests. The Spectrum series has been designed to prepare students with these skills and to enhance student achievement. Developed by experts in the field of education, each title in the Spectrum workbook series offers grade-appropriate instruction and reinforcement in an effective sequence for learning success. Perfect for use at home or in school, and a favorite of parents, homeschoolers, and teachers worldwide, Spectrum is the learning partner students need for complete achievement.

Customer Reviews

Recently I bought several of Spectrum Math, Language Art, and Writing books for my son, so I will write one review and post it for all of them. My son has ADHD and had a very hard time in school. I decided to homeschool him for one year so that he can get a better foundation and then go back to public school. I bought these books with the suggestion of an experienced homeschool mom. They have been great! I am very pleased with how organized and easy to follow these books are. I pretty

much let my son read the instructions and answer the questions himself. He is learning how to learn and his self-confidence is going up. Of course I am there to help him if he needs help, but the books are so well written and organized that he rarely has a question about the instructions or solving the problems in the book. I highly recommend these books for kids that dislike learning, have learning disability, or like my son have ADD or ADHD. Also, I bought couple of books (level 1 and level 2) titled "Building Thinking Skills" author Sandra Parks and Howard Black. These books are great tools for my son to help him to learn how to think logically to solve problem. I highly recommend them.

I homeschool and this book is in daily use at our home. I also got 7, and it's great tool I highly recommend this to any homeschool parent. A great tool for making math easier..and yes it does contain the answers to make things easier for you.

I purchased Spectrum Math, Grade 6 and McGraw-Hill's Math Grade 6 at the same time and the McGraw-Hill's is better, but they both give a math student the extra practice to get comfortable with how to solve Math problems.

My son who was slightly resistant to homework in the summer really did do this without too much fuss. The graphics are nice and each page has good examples. It seems to follow Common Core fairly well.

I bought this book for my son who just finished 4th grade. We like it. It's challenging enough for him as entering 5th grade, but I'm not sure about 6-graders. It has 13 chapters and covers addition and subtraction through 6 digits, fractions and decimals, multiplication and division of whole numbers and decimals, finding percentage, customary and metric measurement, probability and statistics, geometry, and preparing for algebra. Concludes with final test. Answers are at the end, so it's easy to tear them out and check his answers when he's done. We also bought Spectrum Grade 7, but will start it after this one.

After searching all over for the best math book to use for my daughter's homeschooling I'm surprised to find that this is it. I thought it would be something we'd just use as an add-on for extra practice but I am happier with the Spectrum math workbook than I am with any of the other homeschool resources I've purchased for her. The Spectrum Geography and Science books are lacking but you can't go wrong with the math, reading, writing, and language arts books in this

series. I have always been horrible at math but even I can follow the instructions given in this book and help my daughter with her work. I love it.

This is challenging in that there are problems/subjects that due to the Common Core & critical thinking developmental program, are I feel way too advance at these early grades. I couldn't do some of these problems that quickly & not able to teach my kids the concepts so readily (need a real teacher & homework & repetitive learning/practice which had gone by the way side today). Don't expect my kids to get every answer right - but it is there to be used to be challenged. It is a needed tool to keep their brains active during the summer (also during the school year).

I've used these Spectrum books for a few years. Great way to keep the kids' working throughout the summer; just give them 1-2 pages a day to do. Answers are on the back so they can check it themselves or I can review. Great way to keep their brain nimble without burning them out.
